DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

1. Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bui (US 2003/0125662) as modified by Sitzman et al (US 2003/0009106).

Bui discloses in Figure 8 a sedation/analgesia system comprising two or more health monitors (16a, 16b); a user interface; a drug delivery controller (26); and one or more effector controlled by the controller.

Bui discloses the claimed invention expect for the patient health monitor device each generating a signal reflecting a similar physiological condition of the patient and the controller then comparing the signals to ascertain whether the data is reliable. Sitzman et al disclose in paragraphs [0016] and [0021] that it is known to use two different health monitor devices to measure the same physiological condition. It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the device of Bui with the teachings of Sitzman et al since such a modification would ensure that the correct physiological condition of the patient was used in determining a further course of action.

Response to Arguments

Applicant's arguments filed 5/11/2009 have been fully considered but they are not persuasive. Applicant argues that Sitzman does not disclose a controller that compares multiple monitor signals to determine whether the data is reliable and then controls the effector based on the results of the comparison.

Art Unit: 3767

Examiner disagrees. Sitzman discloses in paragraphs [0024-0025] that "cross-assessment algorithm is rule-based algorithm configured to receive heart rates, and other physiological data from each of algorithms 40, 42, and 44 and to cross-assess one or more of the physiological data against one another" ... and that "selection algorithm 38 selects the data source having the most accurate heart rate and provides this heart rate as output data to subsequent processing systems, such as an alarm algorithm, display algorithm, and/or a display/alarm."

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to CATHERINE N. WITCZAK whose telephone number is (571)272-7179. The examiner can normally be reached on Monday through Friday, 8-5 EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kevin Sirmons can be reached on (571) 272-4965. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
